HE, A NEW APPROACH FOR GREATER IMPACT

European partnerships

- Reduces the number of partnerships ensuring a simplified and more transparent form, reaching a broader set of stakeholders and creating stronger links with EU and national policies

Missions

- Address global challenges that affect our daily lives and, for this purpose, put forward ambitious and inspirational but achievable goals

EUROPEAN PARTNERSHIPS IN HE (\pm 50% PILLAR II BUDGET)

PILLAR II - Global challenges & European industrial competitiveness

| CLUSTER 1: Health | CLUSTER 4: Digital, Industry & Space | CLUSTER 5: Climate, Energy & Mobility | CLUSTER 6: Food, Bioeconomy, Agriculture, ... |
|---|--------------------------------------|---|--|
| Innovative Health Initiative | Key Digital Technologies | Clean Hydrogen | Circular Bio-based Europe |
| Global Health Partnership | Smart Networks & Services | Clean Aviation | Rescuing Biodiversity to Safeguard Life on Earth |

PARTNERSHIPS

European Partnership for an Industrial Battery Value Chain

- **Batteries Europe** is the technology and innovation platform of the European Battery Alliance (EBA).
- It aims to accelerate the establishment of a globally competitive European battery industry, driving the implementation of battery-related research and innovation actions of the Strategic Energy Technology (SET) Plan and the Strategic Transport Research and Innovation Agenda.

EIT Climate-KIC

Healthy, Clean Cities

Fifteen cities across Europe are working with EIT Climate-KIC to accelerate their transitions towards carbon neutrality and climate resilience.

Resilient Regions

We work with regions particularly exposed to climate impacts due to the make-up of their landscapes, economies and societies.

Climate-friendly Food Systems and Diets

Work with us to catalyse a shift towards a healthy food system that can feed future generations within planetary boundaries.

Circular Regenerative Economies

The government of Slovenia has articulated the ambitious and inspiring aim to become the world's first fully circular national economy.

Landscapes as Carbon Sinks

We apply systems thinking to help turn a number of specific landscapes across Europe from carbon sources to carbon sinks.

Resilient, Net-Zero-Emissions Maritime Hubs

We are working with ambitious ports and shipping industry leaders to create a circular, inclusive, net-zero-emissions maritime sector.

Long-termism

We're designing a demonstration to address short-term thinking (in finance and other areas of society) that prevents the 1.5C transition we need.

Just Transformations

We're working for democratic and inclusive transitions in regions still economically dependent on fossil fuels and polluting industries.

Active Mobility

This area aims to increase active mobility in partner cities. This would include a modal shift from private motorised vehicles to active mobility showing a decrease in noise and air pollution and increasing healthy city living.

Intermodality

This area aims to drive better use of existing mobility services and facilitate the integration of new solutions, business models and mobility modes. This includes increasing interconnectivity and accessibility of, and between, mobility modes and networked hubs.

Mobility infrastructure

This area aims to promote innovation and improvement in mobility infrastructure and the built environment. This covers architecture and urban planning, community co-design, and use of innovative materials.

EIT Urban Mobility

Mobility for all

This area aims to improve physical and geographic accessibility for target groups and vulnerable travelers. The universal service obligations of public transport should be reflected in design, testing and adoption of new mobility solution, services and products.

Sustainable city logistics

This area aims to improve urban services, goods delivery and waste management operations through logistics, future vehicle design, behavioural and technological innovations.

Creating public realm

This area will improve the design, use and management of public spaces, and reduction of space allocated to vehicles. Curbside design with variable and modular use will be considered as well permanent takeback of public space.

Future mobility

This area promotes digital technologies such as artificial intelligence, 5G, sensors and smart infrastructure. These technologies enable the mobility innovation, such as Mobility as a Service (MaaS), Collaborative – Intelligent Transport Systems (C-ITS), Connected Autonomous Vehicles (CAV) and Internet of Things (IoT), to improve mobility operations and safety.

Mobility and energy

This area support the replacement of Internal Combustion Engines (ICE) with cleaner fuel-propulsion solutions requires new vehicle technologies, retro-fitting, charging/refuelling, and balancing supply/ demand balance.

Pollution reduction

This area aims to lower levels of urban mobility-related air and noise pollution, provide mitigation actions, reduce greenhouse gas emissions and increase urban life quality of life. This also includes reductions in particulate matter (PM2.5 and PM10), volatile organic compounds (VOC), nitrogen oxides, sulphur dioxide, carbon monoxide, and black carbon.
